This script will be placed in the startup folder so it runs when the user logs in.

```
@echo off
REM Get the path to the logged-on user's desktop
set desktopPath=%USERPROFILE%\Desktop

REM Check and delete "Roblox Player.lnk" if it exists
if exist "%desktopPath%\Roblox Player.lnk" (
    del "%desktopPath%\Roblox Player.lnk"
    echo "Roblox Player.lnk deleted."
) else (
    echo "Roblox Player.lnk does not exist."
)

REM Check and delete "Roblox Studio.lnk" if it exists
if exist "%desktopPath%\Roblox Studio.lnk" (
    del "%desktopPath%\Roblox Studio.lnk"
    echo "Roblox Studio.lnk deleted."
) else (
    echo "Roblox Studio.lnk does not exist."
)
```

Save this script with a .bat extension, for example, delete_roblox_links.bat, and place it in the startup folder. The startup folder for the current user can typically be found at:

C:\Users\<Username>\AppData\Roaming\Microsoft\Windows\Start Menu\Programs\Startup

To place the script in the startup folder:

Press Win + R, type shell:startup, and press Enter or open it using the path above. This will open the startup folder.

Move the delete_roblox_links.bat file into this folder.

When the user logs in, the script will run and delete the shortcuts if they exist.

I want to personally thank you for this one. I always hated those stupid icons.
and for anyone wondering, yes this does work.

use notepad and save it as "all files" file type and put a ".bat" in the name
